Motivation

- Hybrid superconductor/semiconductor NW
 - potential to most Majorana zero modes
- SAG & MBE
 - no limitation in number of interconnections
 - scalable

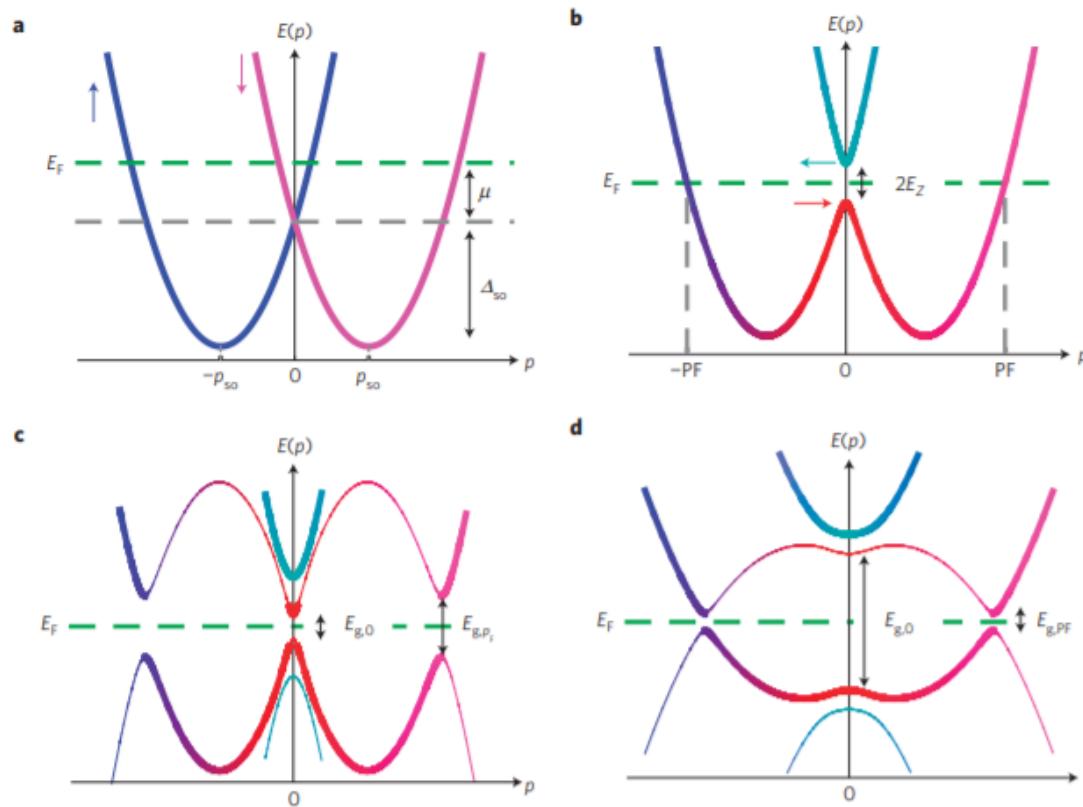

Vapor liquid solid method

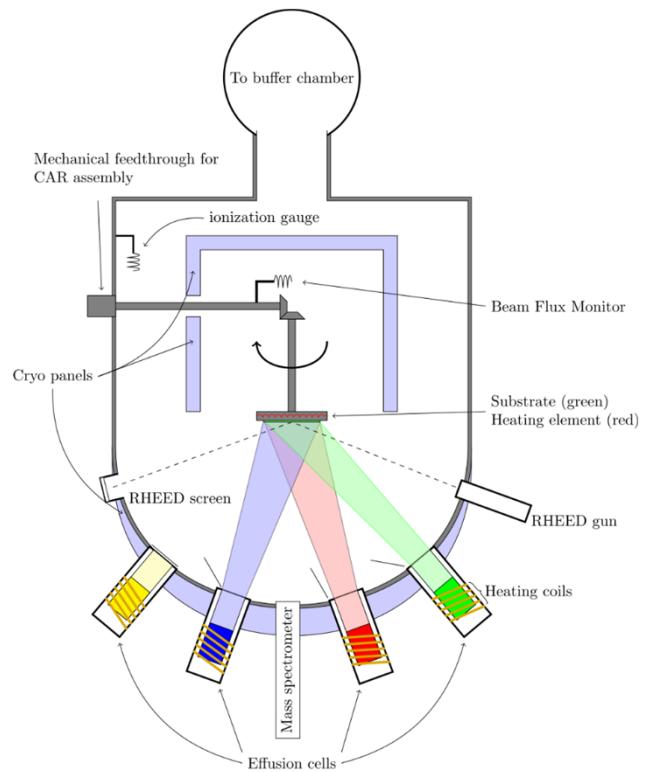

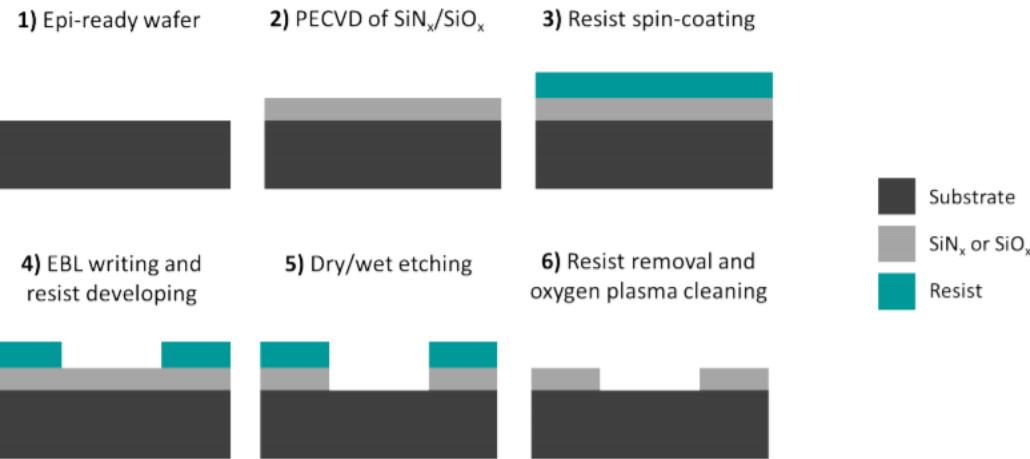

Lutchyn, R. T., Bakkers, E. P. A. M., Kouwenhoven, L. P., Krogstrup, P., Marcus, C. M., & Oreg, Y. (2018). Majorana zero modes in superconductor–semiconductor heterostructures. *Nature Reviews Materials*, 3(5), 52-68.

Potential for Quantum Computing

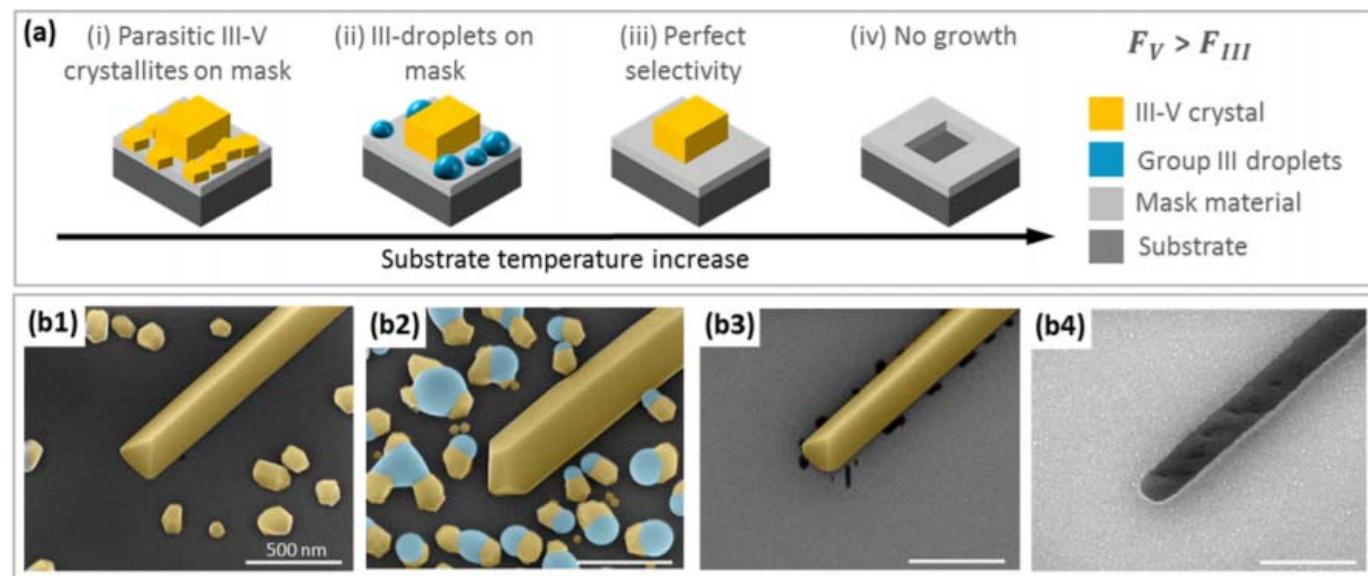

Das, A., Ronen, Y., Most, Y., Oreg, Y., Heiblum, M., & Shtrikman, H. (2012). Zero-bias peaks and splitting in an Al-InAs nanowire topological superconductor as a signature of Majorana fermions. *Nature Physics*, 8(12), 887-895.

Growth Principle

Conclusion

- Showed a selectivity map for SAG of III-V materials
- Realized nearly defect free InAs networks with different complexity and shape
- Demonstrated phase coherent electrical transport
